

ASIMON360 - The new all-round carefree software

Configuration and startup of safe AS-i networks is now even simpler. **The new, intuitive ASIMON360 software** (part of BW2916) shows the user everything he needs to know at just the right moment.

Fig.1: ASIMON360 (part of BW2916)

By including the complete Bihl+Wiedemann product range in the form of a hardware catalog, now just a click on the corresponding device is all that is needed to automatically open all the settings possible in this set-up. Of course modules from other vendors of AS-i components are now also easier to incorporate.

ASIMON360 in detail

- Hardware catalog for simple insertion of products
- Commissioning wizard for automatic configuration and addressing of all devices
- User catalog for creating your own templates and articles
- Intuitive operation, suitable even for beginners
- Tutorials on how-to-use on the website
- To prevent errors only the modules that actually match the product for each connected / to be connected device can be selected
